Command Centre Project Overview

After fitting out their existing 15,000ft² Chinook Sciences natural choice for the design and fit out of their prestigious Command Centre was aci™.

The purpose of the Command Centre is to create an environment where the company can control and monitor each of their high value recycling centres from their Nottingham HQ.

aci™ designed and installed the infrastructure for the completed project from the vast video wall to the bespoke operators pods, each housing six monitor screens. Electronic key operated automatic glazed doors and a separate kitchen area completed the look.
