Turnkey Project Overview

Saint Gobain were looking to provide for their employees a larger and better appointed suit of meeting rooms and offices within their factory space.

The solution was to demolish the existing single storey office and erect a new fire rated mezzanine floor providing double the amount of office space. Saint Gobain appointed aci to act as main contractor for the works which were commenced within 7 days from order and completed with 6 weeks under strict CDM and health and safety control.

The timescales were very tight and weekend working was necessary to hit the promised completion date. A special feature of the mezzanine design was a large cantilever section to allow visibility of the factory and production line whilst not impeding the working area below.
