PROJECT OVERVIEW

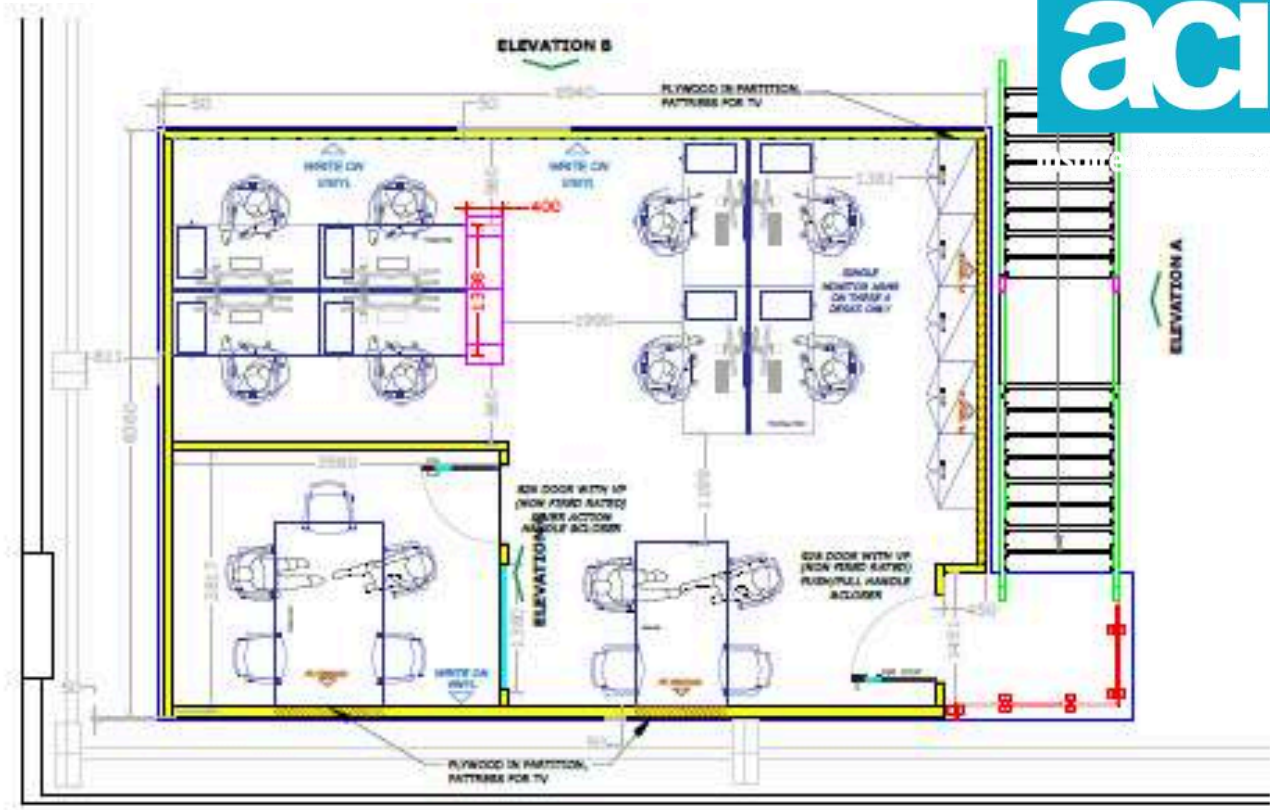

Designed to create a office space for the Cimcorp staff we designed and installed a mezzanine with an office space below.

The mezzanine which was installed had various calculations carried out prior to ensure that the structure would be fit for purpose and the how the weight load would be distributed in addition to the fit out including fire rated ceilings, standard and emergency lighting.

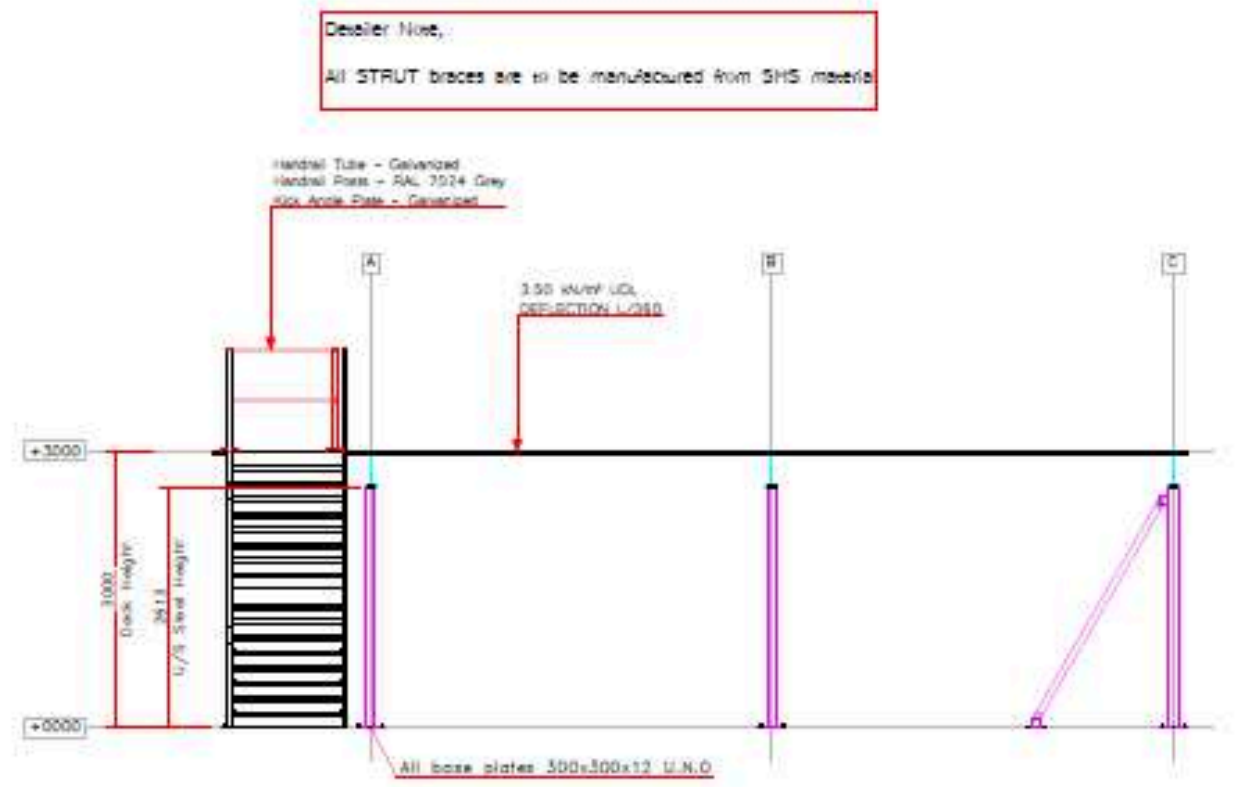

Within the office layout the partition structure was taken into account to allow for pattrass within the wall.

FINISHES OVERVIEW

The furniture finishes were very monochromatic as per the clients request.

In addition to the furniture we also installed a write on vinyl across the back wall, wall graphics displaying the brand.

The flooring was carefully considered as the stand carpet flooring for offices would not uphold the longevity compared to a rubber flooring due to the environment of the business.
