Mezzanine & Shelving

ACI worked with Cromwell Tools to create a practical, high-capacity storage solution for their new Bristol Hub facility.

The project included the design and installation of a 348m² mezzanine floor with a 4.8kN/m² loading, complete with a general access staircase, industrial handrail and kickflat protection.

To maximise available storage space, Unirack shelving was installed above and below the mezzanine, supported by Superbuild pallet racking up to 6m high.

Office Fit Out Works

As part of the new Bristol Hub facility, we delivered a complete office fit out to create functional workspaces within the wider warehouse environment.

The works included office partitioning, glazed window modules, oak veneer doors, drylining, suspended ceilings, flooring, kitchen facilities and toilets.

Mechanical and electrical works were also incorporated, including LED lighting, power, data, access control, fire detection, air conditioning and heating.

Mesh Partitioning

To improve security and control access within Cromwell Tools' Bristol Hub, we supplied and installed secure mesh partitioning as part of the wider warehouse fit out.

The works included 3m high angle frame mesh partitioning to the front shutter areas, complete with sliding doors, as well as single doors and return sections to the rear fire exits.

A mesh ceiling was also installed over the secure areas, creating enclosed, protected zones while maintaining visibility and airflow throughout.
