PROJECT OVERVIEW

Designed for heavy duty usage, the existing welfare area for Sertec needed to be fully refurbished and enclosed to meet building regulations.

Throughout this project we worked alongside building regulators to ensure that the mezzanine structure was fire rated where needed but was also suitable for the designated loading waits/usage.

Due to the scale and height of the project ACI organised for hire equipment including, mobile towers, scissor lifts and steel cutters.

AFTER

PROJECT OVERVIEW

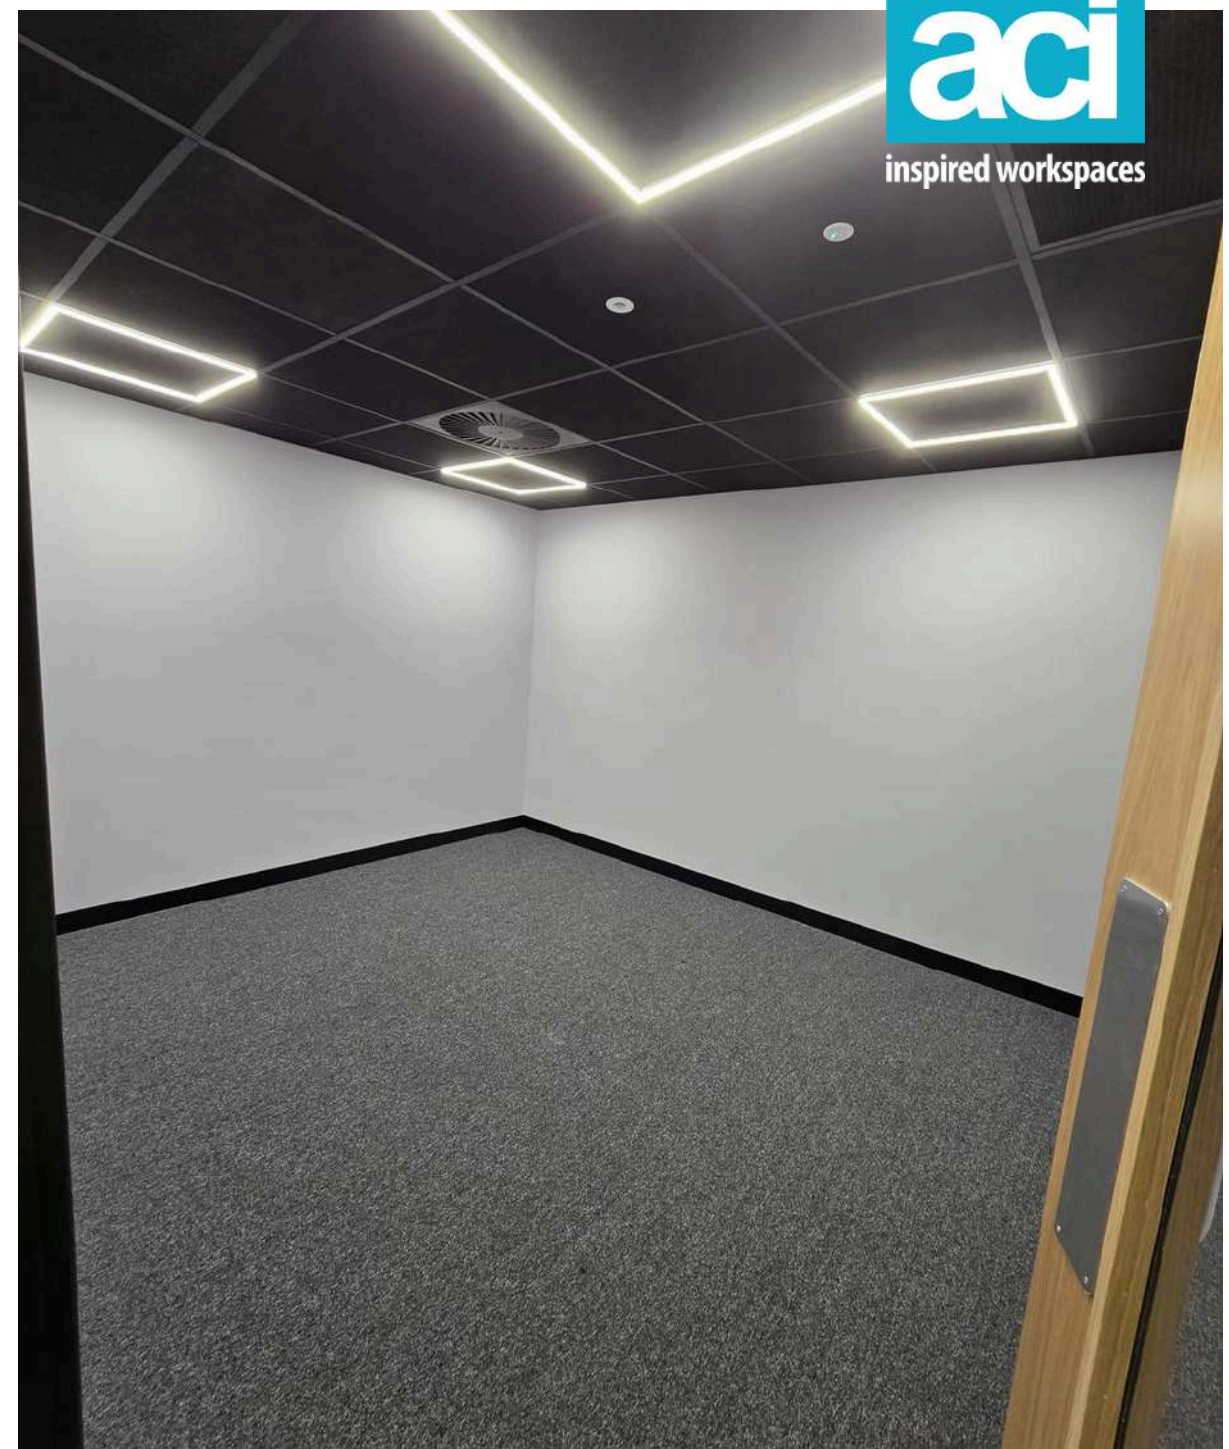

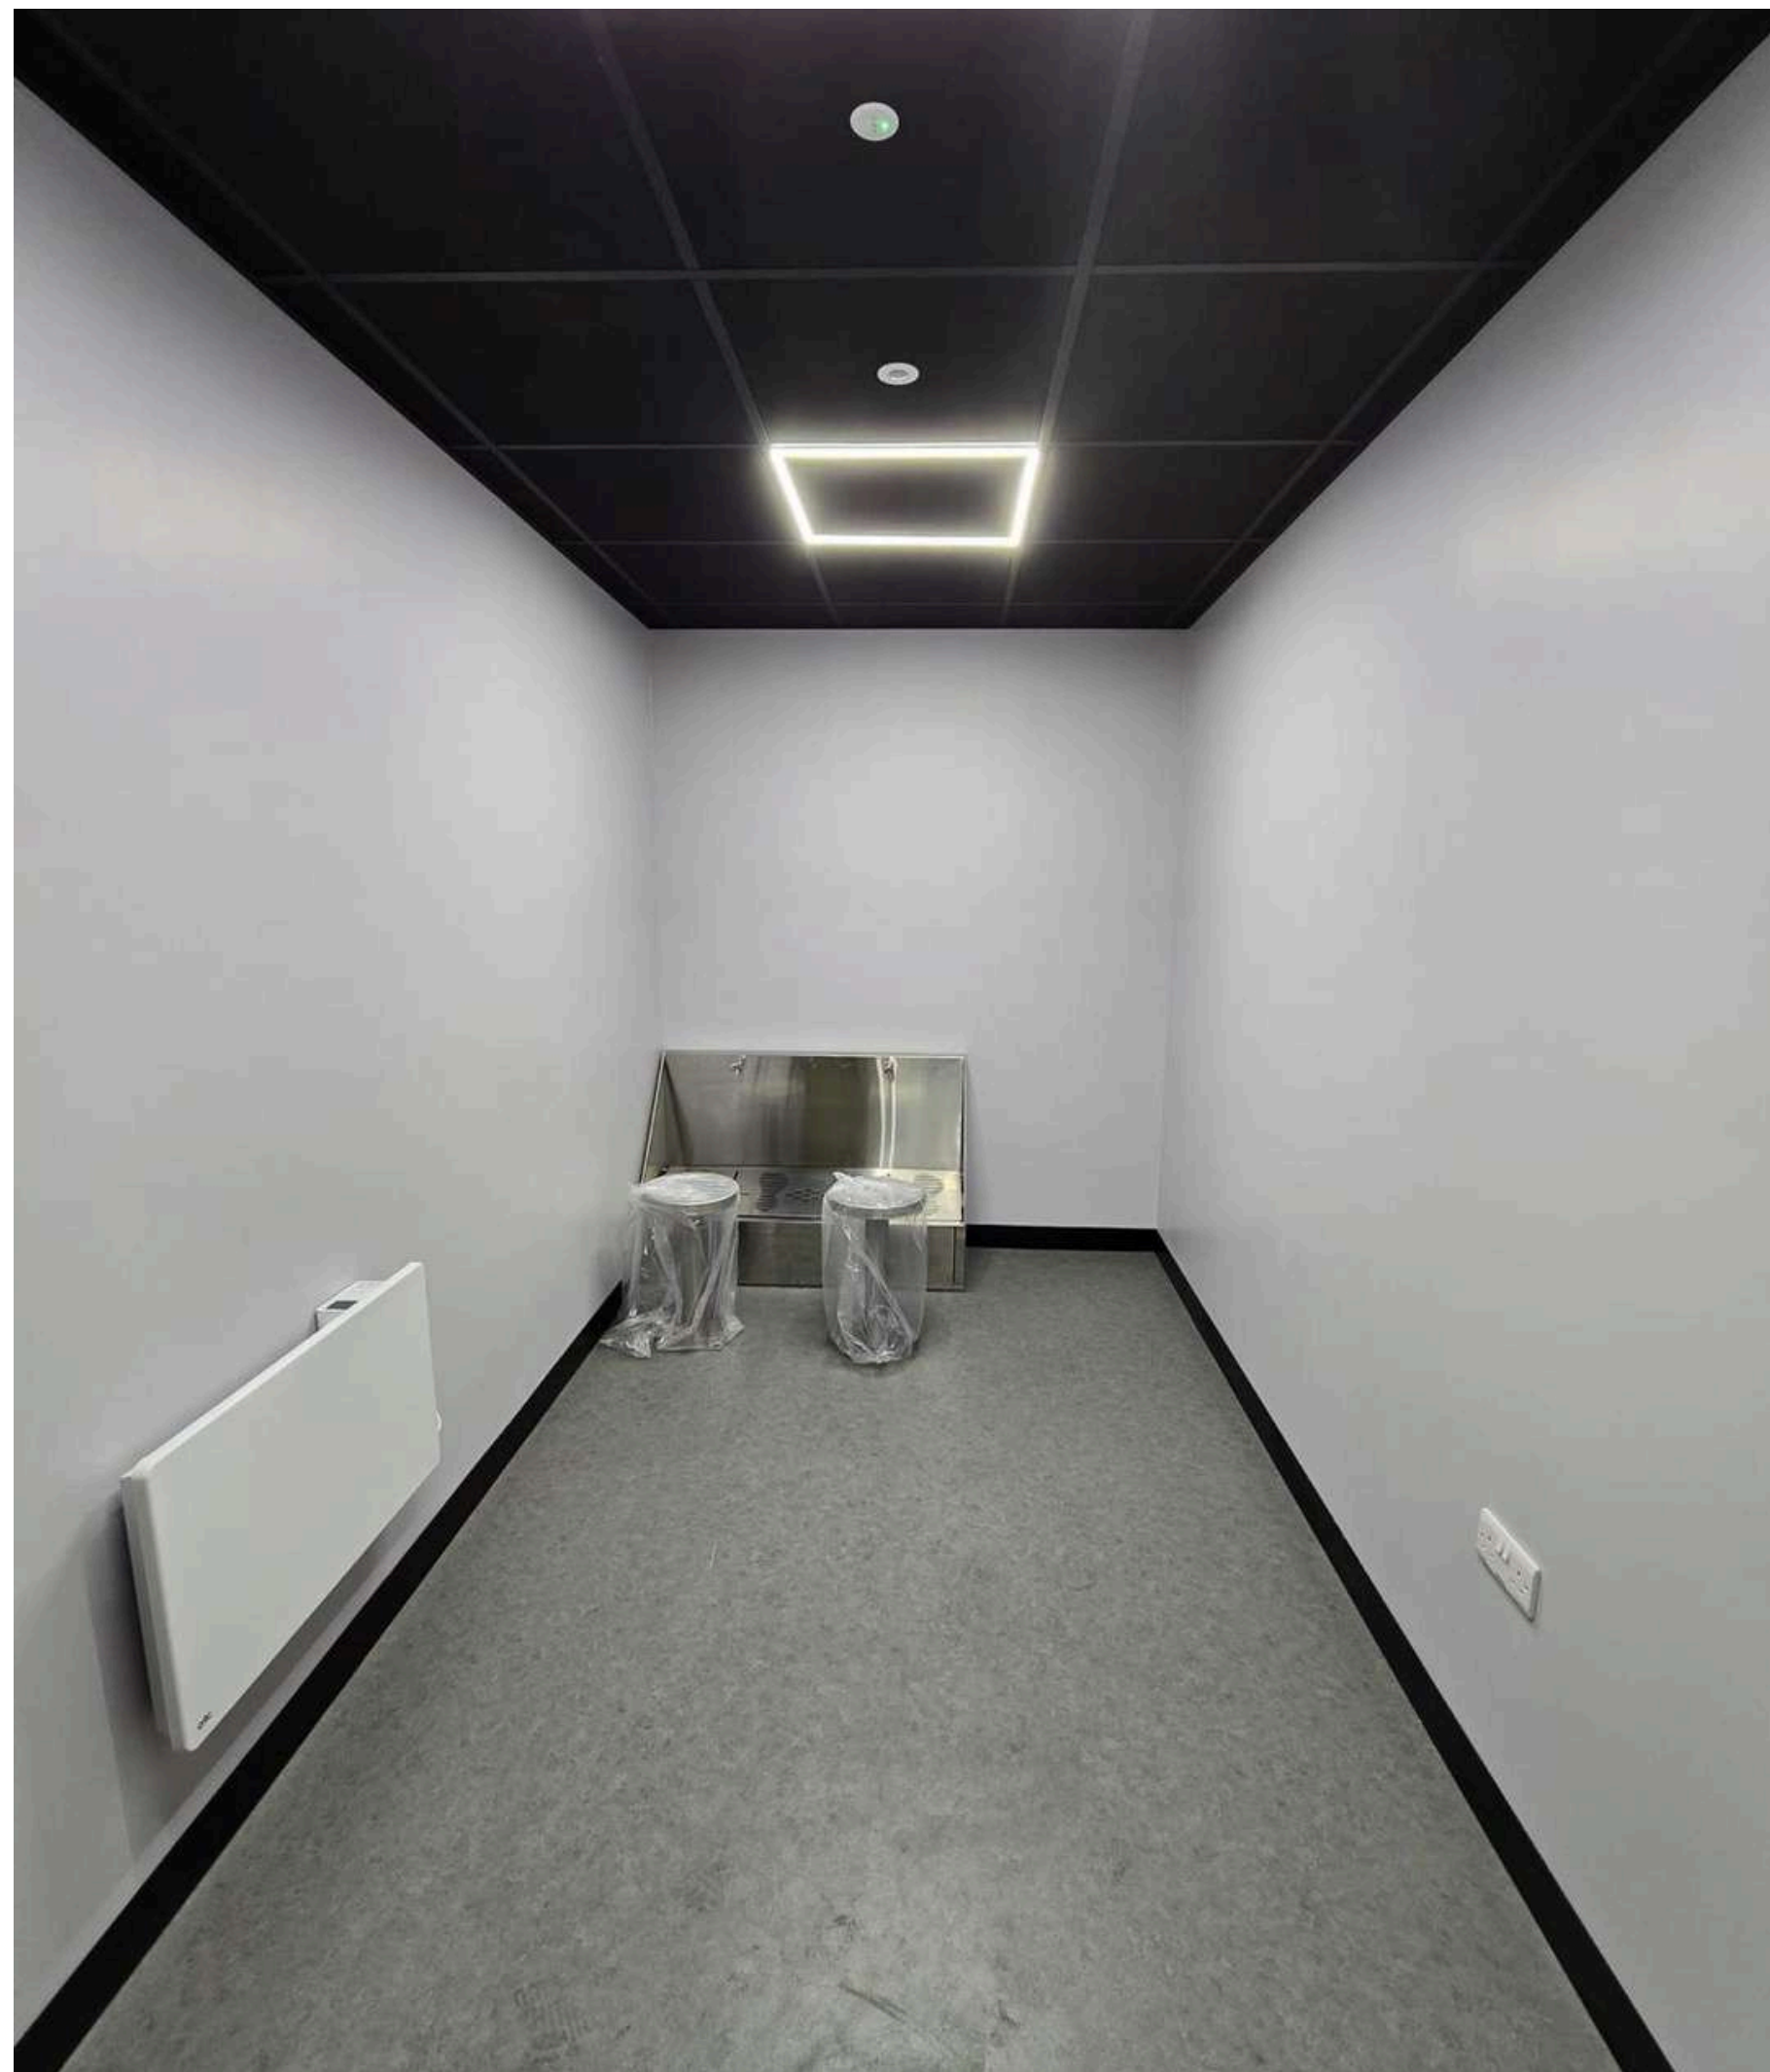

For the refurbishment of the welfare area we included a 60 minute fire rated black suspended ceiling, fire rated jumbo partition walls, new hard wearing safety flooring and oak veneer doors where required.

The existing worktop/food preparation area was not functional for the staff as a result we designed a bespoke kitchen layout and included bespoke back-splash to display the clients brand.

The finishes and furniture items were kept simple to ensure durability due to the warehouse environment.

BEFORE

PROJECT OVERVIEW

In addition to the canteen we also had to include a prayer area and Wudu wash station to assist with the companies staff requirements.
